GLOMEX CAMBOAT HD VIDEO CAMERA OFFERS MASSIVE SECURITY

Recent news reports of hackers breaking into Wi-Fi systems to watch people through their own security cameras is chilling, especially when it's not too difficult to do. Glomex CamBoat™ offers a host of features to campers, but its security is unparalleled. It uses an encrypted one-to-one connection for 100% absolute security. Now, whether hundreds of miles away from the caravan or motorhome, or sitting right outside it checking on children sleeping inside, only the owner has access to the real-time, streaming video feed.

Free to use and truly plug-and-play, CamBoat doesn't have fees or cloud subscriptions. Once installed and connected to the caravan's power supply and Wi-Fi signal, there's nothing more to do except download the easy-to-use Glomex app. Available for Android and iOS, it's simple to set up and pair with the camera.

CamBoat has an integrated motion sensor for 24/7/365 use. When activated, video and sound are automatically recorded onto the internal SD card. A notification is sent to the mobile device alerting the owner that movement has been detected.

Even with the lights off, CamBoat works. It has built-in infrared night vision that shows what's happening up to 50' away.

-more-

At only 89mm round by 84mm high, Glomex CamBoat fits into the tightest spots. The 720p HD-1 MP camera has a wide 80° field of vision for maximum coverage.

Built originally for use on yachts and ships, CamBoat is IP-65 rated and operates between -10° and 50° C, so it can be used outside the caravan or motorhome. It uses a 12V DC power supply and has a maximum draw of 230mA.

Glomex manufactures a wide range of high-performance products that keep campers connected, everywhere. It offers 4G Wi-Fi and HD omnidirectional terrestrial TV antennas and mounting solutions, and ZigRV™, a complete wireless monitoring system that CamBoat can integrate into.
